

File Tracker

FILE TRACKER FROM BEAR SOLUTIONS makes scanning of documents from your Multi Function Device (MFD) so much simpler. It also removes the need for administration of mailboxes and profiles on a fleet of MFDs.

Designed to meet your organisation's growing scanning needs, File Tracker's strength is in providing a fast, secure and audited scanning workflow through the integration of BEAR's CMSIP and your MFD.

How does it work? Firstly the user identifies themselves at the MFD via the BEAR CMSIP Terminal or BEAR CMSIP Embedded Terminal (a virtual terminal operated on the MFD control panel). Stored within the database is the user's network ID or email address. The user then selects the pre-configured MFD scan function which communicates to CMSIP File Tracker. From here the document is audited to determine the number of pages in the scan and delivered to either the user's network home folder or email address.

File Tracker offers users full scanning control and auditing from a single card or network ID logon.

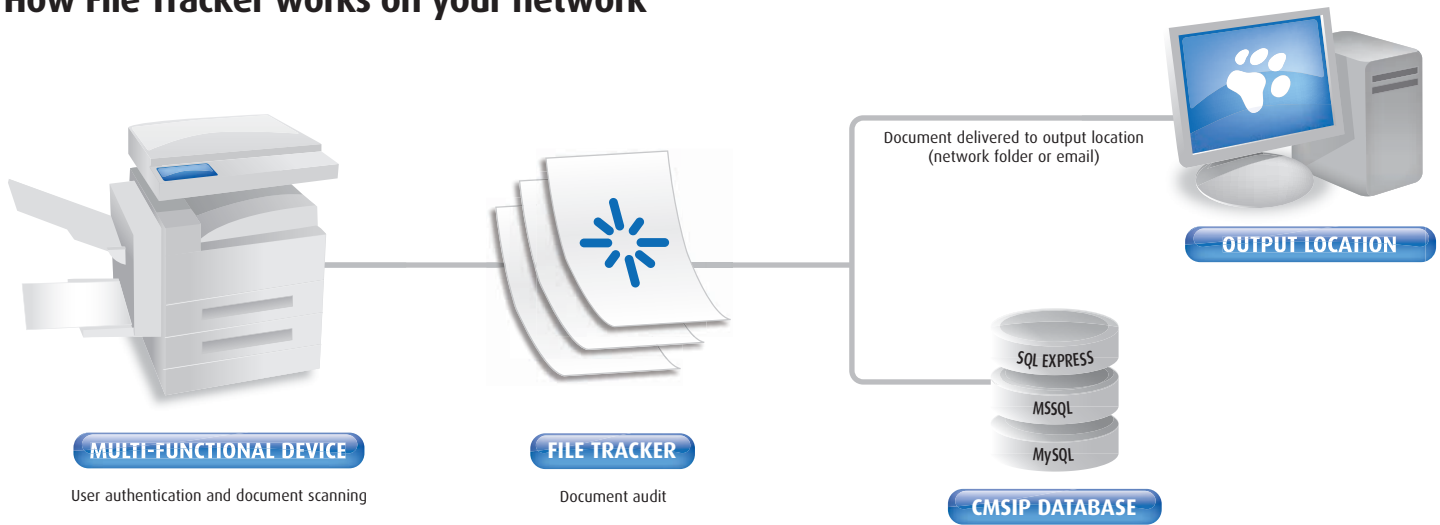

Benefits

- Single user sign on for scan control
- Increased security
- Improved workflow
- Faster scanning
- Inbuilt file compression
- Quick and simple management of fleet scanning capabilities
- Accurate scan counts
- Multiple charge and capture functions
- Terminal also used for copy and print release

How File Tracker works on your network

File Tracker will meet the growing scanning needs of your organisation by providing a fast, secure and audited scanning workflow. Integration with BEARs CMSIP is File Tracker's strength in scan auditing and delivery.

Features

- ➔ Single user sign on for scan control providing increased security by preventing incorrect email addresses being entered
- ➔ Improved workflow through faster scanning by storing the output destination within CMSIP and linking to the users card at logon
- ➔ Quick and simple management of fleet scanning capabilities without the need to configure new users (users are managed through the CMSIP database)
- ➔ Complete scan auditing including user, account and page quantity
- ➔ Scans can be charged on a per page basis providing a charge model for clients utilising the service
- ➔ Inbuilt intelligence compresses larger files for email file size restrictions

Technical Specifications

BEAR Solutions CMSIP must be installed

CMSIP SOAP Server

Microsoft XP, Vista, 2003 Server or 2008 Server (32/64 bit)

Microsoft Internet Information Server 5+

Installation of an FTP server

Refer to BEAR Solutions for list of compatible MFD's
